This book will explain the doctoral journey, the researcher's orientation, personal challenges, and process pathway for successful completion. This book will examine doctoral studies' motivation, build a compelling research argument, decide how to structure a thesis/dissertation, remain on task, and expedite the process while maintaining high-quality standards. This book will explain how a Ph.D. candidate should start the process, stay focused on the tasks, separate passion from the process, understand the challenges, and overcome them. We will explain how a Ph.D. mindset should adjust to the processes rather than entrenched in a passion that may not match the process's realities. Globally, the need for completing doctoral studies is growing. However, prospective doctoral candidates do not always have access to experienced academe who can aid and provide guidance. This book will include the necessary thought process and supportive guidelines along the doctoral journey enabling the delivery of a doctoral thesis/dissertation with more ease. Ph.D. candidates will use the book for its theoretical and practical insights, explaining each challenge along the doctoral journey with relevant examples. The book will have a fourfold purpose, a thought initiator, a process guide, practical support, and a reference book on specific parts of the doctoral journey. It also includes essays of successful Ph.D. candidates and lessons learned. In the last few years, researchers around the world have increasingly reported the importance of acid-alkaline balance. The Acid-Alkaline Food Guide was designed as an easy-to-follow guide to the most common foods that influence your body's pH level. Now in its Second Edition, this bestseller has been expanded to include many more domestic and international foods. Updated information also explores (and refutes) the myths about pH balance and diet, and guides the reader to supplements that can help the body achieve a healthy pH level. The Acid-Alkaline Food Guide begins by explaining how the acid-alkaline environment of the body is influenced by foods. It then presents a list of thousands of foods and their acid-alkaline effects. Included are not only single foods, such as fruits and vegetables, but also popular combination and even common fast foods. In each case, you'll not only discover whether a food is acidifying or alkalizing, but also learn the degree to which that food affects the body. Informative insets guide you in choosing the food that's right for you. The first book of its kind—now updated and expanded—The Acid-Alkaline Food Guide will quickly become the resource you turn to at home, in restaurants, and whenever you want to select a food that can help you reach your health and dietary goals. This book outlines the theory behind the "BASIC Ph" approach, presents practice-based and research-based interventions and explains their application during and in the wake of both natural and man-made disasters. This book shows how the "BASIC Ph" model can be successfully applied in family, community, education, health, and business settings. "What is the mind?" "What is the relationship between brain and mind?" These are common questions. But "What is the brain?" is a rare question in both the neurosciences and philosophy. The reason for this may lie in the brain itself: Is there a "brain problem"? In this fresh and innovative book, Georg Northoff demonstrates that there is in fact a "brain problem". He argues that our brain can only be understood when its empirical functions are directly related to the modes of acquiring knowledge, our epistemic abilities and inabilities. Drawing on the latest neuroscientific data and philosophical theories, he provides an empirical-epistemic definition of the brain. Northoff reveals the basic conceptual confusion about the relationship between mind and brain that has so obstinately been lingering in both neuroscience and philosophy. He subsequently develops an alternative framework where the integration of the brain within body and environment is central. This novel approach plunges the reader into the depths of our own brain. The "Philosophy of the Brain" that emerges opens the door to a fascinating world of new findings that explore the mind and its relationship to our very human brain. (Series A) When The Ph.D. Trap was first published in 1987, it hit academe like a bombshell. Wilfred Cude dared to pull back the veil of graduate school life to expose the harsh realities of modern advanced study. Using statistics, academic history, and diverse intellectual traditions, Cude revealed the Ph.D. program in most disciplines to be savage, mechanical, and cruel - an exploitative construct that often frustrates legitimate intellectual inquiry, shatters viable career expectations, and mangles personal and professional relations. In the years since, an outpouring of books, articles, and statistical data delineating serious weaknesses in contemporary higher education has provided a wealth of evidence supporting Cude's original thesis. The Ph.D. Trap Revisited amplifies Cude's arguments, with a synthesis and analysis of new data and information. Topics examined include the grad school numbers game, the rogue professor, muddles in methodology, the perils of apprenticeship, ethics and economics, existing alternatives, and recommendations for change. In an age of increasingly unchecked proliferation of the Ph.D. degree throughout academic institutions in the western world, Cude's work is a tonic. The Ph.D. Process offers the essential guidance that students in the biological and physical sciences need to get the most out of their years in graduate school. Drawing upon the insights of numerous current and former graduate students, this book presents a rich portrayal of the intellectual and emotional challenges inherent in becoming a scientist, and offers the informed, practical advice a "best friend" would give about each stage of the graduate school experience. What are the best strategies for applying to a graduate program? How are classes conducted? How should I choose an advisor and a research project? What steps can I take now to make myself more "employable" when I get my degree? What goes on at the oral defense? Through a balanced, thorough examination of issues ranging from lab etiquette to research stress, the authors--each a Ph.D. in the sciences--provide the vital information that will allow students to make informed decisions all along the way to the degree. Headlined sections within each chapter make it fast and easy to look up any subject, while dozens of quotes describing personal experiences in graduate programs from people in diverse scientific fields contribute invaluable real-life expertise. Special attention is also given to the needs of international students. Read in advance, this book prepares students for each step of the graduate school experience that awaits them. Read during the course of a graduate education, it serves as a handy reference

covering virtually all major issues and decisions a doctoral candidate is likely to face. The Ph.D. Process is the one book every graduate student in the biological and physical sciences can use to stay a step ahead, from application all the way through graduation. The principle of balance is not new. It forms the foundation of both Eastern and Western philosophies, from Aristotle to Confucius. As it relates to health, it has been around just as long, from the development of traditional Chinese medicine to the treatments used by Hippocrates and Galen. What is new, however, is a scientifically based application that can improve numerous disorders and maximize your health. Imagine that the human body has an internal mechanism that keeps two basic types of chemicals — acid and alkali — in balance. When your body becomes either too acidic or too alkaline, you become susceptible to a host of disorders. When balance is restored, however, so is your health. In this brilliant book, renowned health expert Alex Guerrero explains how you can become well — now and for an extended lifetime — by restoring your pH balance. The author first describes how you can assess your health. He then provides a plan, including a fourteen-day diet and a simple program of supplements, that will bring your body back into balance. You'll even find a selection of recipes that will tempt your taste buds as you reclaim your health and well-being. Here is a book that will quickly capture the imagination of all those looking for a drug-free way to feel better. In Balance for Life offers an effective, easy-to-follow program that is bound to shake up your beliefs about your own body, and about the steps you can take to maintain or regain your well-being. In Restoration Stage Comedies and Hollywood Remarriage Films, Elizabeth Kraft brings the canon of Restoration comedy into the conversation initiated by Stanley Cavell in his book Pursuits of Happiness: The Hollywood Comedy of Remarriage. Before there could be imagined remarriages of the sort Cavell documents, there had to be imagined marriages of equality. Such imagined marriages were first mapped out on the Restoration stage by witty pairs such as Harriet and Dorimant, Millamant and Mirabell, and Alithea and Harcourt who are precursors of the central couples in films such as Bringing Up Baby, His Girl Friday, and The Lady Eve. In considering the Restoration comedy canon in one-on-one discourse with the Hollywood remarriage comedy canon, Kraft demonstrates the indebtedness of the twentieth-century films to the Restoration dramatic texts—and the philosophical richness of both canons as they explore the nature and significance of marriage as pursuit of moral perfectionism. Her book will be of interest to specialists in Restoration drama and film scholars. Your husband's death is possibly the most devastating event you've ever experienced. You may wonder, "Am I going to be able to make it on my own?" Maybe you feel overwhelmed and don't know what to do next. Students become scientists during this program, exploring the worlds of entomology, oceanography, meteorology, astronomy, chemistry, physics, zoology, and paleontology. A love and understanding of science will grow as the natural curiosity of young children is nurtured and developed. The purpose of this book is to set you free to be who you really are. When you love your Self, and have your boundaries in place, there is not much that can take you off center for too long. This book encourages you to shine in your own full expression in this beautiful life where you know you are loved just for being exactly who you are. New York Times bestselling author and Life Designs, Inc. creator Martha Beck shares her step-by-step program that will guide you to fulfill your own potential and create a joyful life. wounds that may be blocking your progress. This will change your life, but don't worry--although every life is unique, major transformations have common elements, and Beck provides a map that will guide you through your own life changes. You'll learn how to navigate every stage, from the first flickering appearance of a new dream to the planning and implementation of your own ideal life. "Explorers depend on the North Star when there are no other landmarks in sight. The same relationship exists between you and your right life, the ultimate realization of your potential for happiness. I believe that a knowledge of that perfect life sits inside you just as the North Star sits in its unaltering spot." -- Martha Beck This book offers valuable insights into completing your Ph.D., and subsequently finding and excelling at a job. Further, it highlights other opportunities that a Ph.D. can offer, aside from the research and academic aspects. The book focuses on the five stages that Ph.D. candidates normally go through: joining a Ph.D. programme, starting a Ph.D. course, conducting research, writing their dissertation and finally, looking for the ideal job. Serving as an extensive "cheat sheet", it explains the options and choices that need to be made to join and complete a Ph.D. programme; setting expectations; selecting a research topic; celebrating the completion of a Ph.D. programme, and most importantly, how one can continue to develop after its completion. With a bonus chapter in each stage that describe the perspectives and expectations from different people or organizations, this book shares vital lessons, showing readers how to apply them to a range of situations to create a successful Ph.D. ecosystem.

Sample Book Insights: #1 The first stage of directed attention is achieved when we can place our mind on our chosen object of meditation for even a second or two. When we try to direct our attention to a difficult object, such as a complex visualization, this may take days or weeks to accomplish. #2 The practice of mindfulness of breathing involves prolonging our awareness of our breath. While this requires an alert mind, it should not be tense. When we become distracted from the meditation object, it may feel natural to clamp down more forcefully, tightly concentrating the mind. #3 The posture of vigilance is a technique that helps you breathe into your belly when you inhale, and pushes your chest out when you exhale. It is a mental line that runs from between your heels to your navel, and from your navel to your chin. #4 During meditation, maintain the three qualities of your body: be at ease, be still, and be vigilant. Observe your respiration, and do not impose any rhythm on it. Do not even prefer one kind of breath over another. One of the greatest secrets you can ever learn is that you have the power to heal yourself. Perhaps you have thought of this statement yourself. If you have, then you were right on target. Maybe you have come to the conclusion that this special gift belongs only to certain persons; the most spiritually advanced or the most brilliant in the practice of medicine, or psychotherapy. Perhaps you believe that there is something mysterious, even mystical about healing. Throughout the ages, the word healing has been associated with superstition and even strange practices. Today we hear a lot about spiritual healing as a result of prayer, the laying on of hands, and healing services at church or revival meetings. With all of this awareness, most people still think their health is dependent upon some source other than themselves. We must come to the understanding that many illnesses come not only from a lack of life-giving food but from our ill thoughts and feelings about ourselves, others, our Creator, and the world in which we live. These ill thoughts constrict the life force within us, causing dis-ease or lack of ease. It is very interesting to note that the word ill derives from the words evil, wrong or incorrect. It is literally our evil, disagreeable, out of balance, incorrect thoughts and feelings. These feelings are located in your body and plays havoc with your health.. " This book will serve as a light-hearted but strong life-line to many readers who are for one reason or another steeling themselves to walk away from the ivory tower." --Jennifer Lee Carrell, Free-lance writer

This book conceives of "religion-making" broadly as the multiple ways in which social and cultural phenomena are configured and reconfigured within the matrix of a world-religion discourse that is historically and semantically rooted in particular Western and predominantly Christian experiences, knowledges, and institutions. It investigates how religion is universalized and certain ideas, social formations, and practices rendered "religious" are thus integrated in and subordinated to very particular - mostly liberal-secular - assumptions about the relationship between history, politics, and religion. The individual contributions, written by a new generation of scholars with decisively interdisciplinary approaches, examine the processes of translation and globalization of historically specific concepts and practices of religion - and its dialectical counterpart, the secular - into new contexts. This volume contributes to the relatively new field of thought that aspires to unravel the thoroughly intertwined relationships between religion and secularism as modern concepts.
