**Mysticism and Logic and Other Essays** Feb 19 2023 **Mysticism and Logic and Other Essays** is a collection of essays written and edited by Nobel Prize winning author Bertrand Russell. Russell was a heralded British philosopher, historian and mathematician, as well as a well-published author, and is considered one of the great minds of the 20th century. In this collection, Russell challenges romantic mysticism while promoting a logical and mathematics-based approach to interpreting the world around us. The collection opens with one of Russell's most well known essays, **Mysticism and Logic**, in which the author explains his worldview and the need for logic when interpreting life. Nine more essays follow this one, and touch on a range of topics including mathematics, life and death, plurality, the nature of existence, intelligence, and science's role in a liberal education. The first five essays of this collection are "entirely popular" according to Russell, whereas the final four are "somewhat more technical." Despite this disclaimer, the layman will still find these essays readable.

**Language, Thought, and Logic** Oct 23 2020 In this exciting new collection, a distinguished international group of philosophers contribute new essays on central issues in philosophy of language and logic, in honor of Michael Dummett, one of the most influential philosophers of the late twentieth century. The essays are focused on areas particularly associated with Professor Dummett. Five are contributions to the philosophy of language, addressing in particular the nature of truth and meaning and the relation between language and thought. Two contributors discuss time, in particular the reality of the past. The last four essays focus on Frege and the philosophy of mathematics. The volume represents some of the best work in contemporary analytical philosophy.

**The Origins of Analytic Moral Philosophy and Other Essays** Sep 21 2020 Salmeron reconstructs and analyzes key passages of twentieth century philosophical thought on ethics. He recovers the original wealth of the discussions of Moore, Wittgenstein and Russell, and illuminates Moore's work through a careful analysis of its relationships with ideas of his predecessors on the continent, especially Kant and Brentano. Salmeron further analyzes the development of ethical ideas in this century and their relationships with a theory of rationality through a dialogue with authors such as Max Black, Karl Popper and Jurgen Habermas. The author also discusses ethical ideas of Albert Einstein and Jean Paul Sartre. This book will be of interest for all those concerned with the history of philosophy in the twentieth century, particularly with the history of moral philosophy, not in an antiquarian way, but with a focus on the way in which traditions shape current philosophical ideas.

**Philosophy of Logic (Routledge Revivals)** Jan 14 2020 First published in 1971, Professor Putnam's essay concerns itself with the ontological problem in the philosophy of logic and mathematics - that is, the issue of whether the abstract entities spoken of in logic and mathematics really exist. He also deals with the question of whether or not reference to these abstract entities is really indispensable in logic and whether it is necessary in physical science in general.

**Thinking about Logic** Jul 12 2022 Thinking about Logic is an accessible and thought-provoking collection of classic articles in the philosophy of logic. An ideal companion to any formal logic course or textbook, this volume illuminates how logic relates to perennial philosophical issues about knowledge, meaning, rationality, and reality. The editors have selected each essay for its brevity, clarity, and impact and have included insightful introductions and discussion questions. The puzzles raised will help readers acquire a more thorough understanding of fundamental logic concepts and a firmer command of the connections between formal logic and other areas of philosophical study: epistemology, philosophy of language, philosophy of science, and metaphysics.

**Essays on Hegel's Logic** Oct 15 2022 This book, covering all aspects of Hegel's logic, raises fundamental issues as well as particular problems of interpretation. It discusses whether a speculative logic is possible at all and whether Hegelian logic requires a metaphoric or whether it can and ought to make an absolute beginning. It examines, conceptually and historically, the being-nothing dialectic, the relation of essence to show (Schein), and Hegel's treatment of the modal categories. It proposes radically different views of the role of the 'understanding' in Hegelian logic and a radically different view of the necessity underlying it. The book concludes with the argument that Hegel's dialectical logic can cope with a problem that Aristotle's could not. Essays on Hegel's Logic provides a welcome introduction to those interested in this central piece of Hegel's system, and it poses the question of whether, and how, the logic provides a closure to the system. In different ways, and with different degrees of explicitness, the book deals precisely with this issue.

**Mysticism and Logic, and Other Essays** Nov 16 2022 The first essay, which gives its title to the volume, endeavours to define the respective spheres of logic and mysticism.
