Paolo Ulivi provides a well-paced, rapidly moving, balanced, even-handed account of lunar exploration as a popular history. He covers the unmanned programmes, e.g. Ranger, and other American probes in the late '50s and in the later chapters he looks at recent lunar exploration and future plans for the same. It's a book that will be perfect for an enthusiast or someone coming to the story for the first time, as it does not include excessive technical depth. Uniquely drawing on recently declassified documents, detail of Chinese lunar exploration projects is provided, as well as nuclear lunar weapons of the '50s developed by the super powers, Soviet Russia and the United States. Includes the decisions of the Supreme Courts of Missouri, Arkansas, Tennessee, and Texas, and Court of Appeals of Kentucky; Aug./Dec. 1886-May/Aug. 1892, Court of Appeals of Texas; Aug. 1892/Jan./Feb. 1928, Courts of Civil and Criminal Appeals of Texas; Apr./June 1896-Aug./Nov. 1907, Court of Appeals of Indian Territory; May/June 1927-Jan./Feb. 1928, Courts of Appeals of Missouri and Commission of Appeals of Texas. Progress in Astronautics and Rocketry, Volume 10: Technology of Lunar Exploration is an overview of the technical base of the lunar exploration problem. This volume is organized into six sections encompassing 35 that follow the various stages of accomplishment of a lunar mission, involving landing on or orbiting the moon and returning to the earth. The first section is devoted to the problem of trying to define the lunar environment, emphasizing the theories of the lunar environment as it relates to the internal structure of the moon. This section also describes some activities to achieve a reasonable theory concerning what might be encountered in some of the previous lunar flight programs. The second section explores the problems associated with the limitations imposed upon lunar missions by the launch vehicles and launching facilities. The third section looks at the spacecraft systems and techniques required for lunar missions, particularly the technology and specific subsystems in relation to the requirements imposed by specific lunar mission objectives. The fourth section deals with the actual landing on the moon and the subsequent surface operations, while the fifth section covers the lunar launch, return, flight re-entry, and subsequent landing on earth. The sixth section reports the status of the projects that represent the United States lunar exploration program, which integrates the technologies developed in the preceding sections into certain discrete projects. Mustang Designer tells the story of American wartime fighter development, including engines and armaments, as part of a nationwide program of aircraft builders and fliers, focusing on Edgar Schmued, the designer of the Mustang. The P-51 Mustang is widely regarded as the best propeller-driven fighter that ever flew. What many might not realize is that the plane's developer was a German migrant. This book tells of how Schmued created a weapon that would ultimately prove lethal to the aspirations of those who had seized control over his native land. This comprehensive book provides the knowledge and tools required to conduct a human error analysis of accidents. Serving as an excellent reference guide for many safety professionals and investigators already in the field. Richard Belzer and David Wayne are back to set the record straight after Dead Wrong; this time they're going to uncover the truth about the many witness deaths tied to the JFK assassination. For decades, government pundits have dismissed these "coincidental" deaths, even regarding them as "myths" as "urban legends." Like most people, Richard and David were initially unsure about what to make of these 'coincidences'. After all, events don't "consult the odds" prior to happening; they simply happen. Then someone comes along later and figures out what the odds of it happening were. Some of the deaths seemed purely coincidental; heart attacks, hunting accidents. Others clearly seemed noteworthy; witnesses who did seem to know something and did seem to die mysteriously. Hit List is a fair examination of the evidence of each case, leading to (necessarily) different conclusions. The findings were absolutely staggering; as some cases were clearly linked to a "clean-up operation" after the murder of President Kennedy, while others were the result of 'other forces'. The impeccable research

and writing of Richard Belzer and David Wayne show that if the government is trying to hide anything, they're the duo who will uncover it. LIFE Magazine is the treasured photographic magazine that chronicled the 20th Century. It now lives on at LIFE.com, the largest, most amazing collection of professional photography on the internet. Users can browse, search and view photos of today's people and events. They have free access to share, print and post images for personal use. SPACE SPARKS THE IMAGINATION in fantastic ways, but nothing quite captures people's attention more than when we actually reach out and touch another world. Whether it's missions to the Moon, transporting rovers to Mars or landing Philae on a comet, the idea that we can not only picture these worlds from afar, but to touch them is wonderfully inspiring, and it is through cutting-edge robotic technology that it is made possible. In Robots in Space expert space journalist Dr Ezzy Pearson delves into the fascinating robotic history of space exploration, from distant times when stars were an unreachable godly mystery, through the intense Space Race following the Second World War to the Mars missions of the twenty-first century. As we find ourselves on the cusp of a new and exciting space age, Pearson explores how and why humanity turns its best minds to travelling to the stars, and exactly how far we could go. The importance of marine salvage during armed conflict has been vastly underestimated since becoming a vital Naval arm during the First World War. Between 1915 and 1918 the Admiralty Salvage Section saved nearly 400 merchant vessels, desperately needed to bring food and war materials into Britain. During the Second World War, some two million tons of shipping was successfully recovered. From D-Day onwards Admiralty salvage men cleared many stricken craft from the Normandy beaches alone, often under heavy shellfire. Then, as the Germans retreated back across Europe, salvage teams undertook vital port clearance duties. During the Suez Crisis, Falklands Conflict and even the Gulf War the same story can be told. And their peacetime operations have also been important. Drawing on a wealth of official documents, Admiralty Salvage is the first book to explore in depth the courage, personal sacrifice and invaluable contribution these forgotten heroes have made during both peace and war. In this well-researched book by Thomas H. Taylor, you will see why the Rangers have become one of the U.S. Army's elite fighting groups. Discover their roots from the early days of Darby's Rangers through WWII and Korea. Maps show where they have been and action photographs capture the stress of training and the demands of combat. Follow the Rangers as they lead the way through 50 years of military history! "This comprehensive reference work provides immediate, fingertip access to state-of-the-art technology in nearly 700 self-contained articles written by over 900 international authorities. Each article in the Encyclopedia features current developments and trends in computers, software, vendors, and applications...extensive bibliographies of leading figures in the field, such as Samuel Alexander, John von Neumann, and Norbert Wiener...and in-depth analysis of future directions." When literary biographer and memoirist Louise DeSalvo embarked upon a journey to learn why her father came home from World War II a changed man, she didn't realize her quest would take ten years, and that it would yield more revelations about the man—and herself—and the effect of his military service upon their family than she'd ever imagined. During his last years, as he told her about his life, DeSalvo began to understand that her obsession with war novels and military history wasn't merely academic but rooted in her desire to understand this complex father whom she both adored and reviled because of his mistreatment of her. Although she at first believes she wants to uncover his story, the story of a man who was no hero but who was nonetheless adversely affected by his military service, she learns that what she really wants is to recover the man that he was before he went away. As DeSalvo and her father uncover his past piece-by-piece, bit-by-bit, she learns about the dreams of a working-class man who entered the military in the late 1930s during peacetime to better himself, a man who wanted to become a pilot. She learns about what it was like for him to participate in war games in the Pacific prior to the war, and its devastating toll. She learns about what it was like for her parents to fall in love, set up house, marry, and have children during this cataclysmic time. And as the pieces of her father's life fall into place as works to piece together the puzzle of everything she's learned about this time, she finds herself finally able to understand him. Chasing Ghosts is an original contribution to the understanding of working-class World War II veterans who did not conventionally distinguish themselves through "heroic" actions and whose lives were not until recently considered worthy of historical or cultural attention. It personalizes the history of those sailors who served in the Navy aboard aircraft carriers and on islands in the Pacific prior to, and during World War II and contributes to the current vital conversation about the often-unrecognized effects of war and its traumas upon those men and their families. It reveals the lifelong devastating consequences of military service on those men and women who fell in love, married, and set up house. And it reveals the complexity of what it is like to be the daughter of a father who has gone to war.
